

*STAFIX®STATIC is a glue-free sticker material that adheres to almost any clean surface with a static charge. The material adheres on average for 3 months and is easy to apply and removable without leaving any residue.*

## USE

STAFIX®STATIC adheres to various clean and smooth surfaces, such as:

- glass
- stainless steel
- tiles
- plastic
- aluminium
- wood

Thanks to the material's versatility, it can be used in various applications, such as:

- Retail advertising (e.g. freezers and -fridges)
- Store decoration and window display
- Events and exhibitions

## INSTALLING STAFIX®STATIC

*White & clear*

**1** Make sure the surface is clean. If needed clean the surface but do not use detergent or chemicals. Apply the film always from the unprinted side.

**2** Peel the STAFIX®STATIC film from the backer and place it on the surface from the unprinted side. For large posters or banners exceeding 1 m in length is recommended to do the installation with assistance of another person to avoid the film being wrinkled or catching dust and dirt from the floor.

**3** Remove the air between the film and the applied surface to assure strong adhesion. You can use the cardboard backer for this.

***This use & installation guide is recommended to be provided by printing houses with the ready, printed products.***

## MIRROR-WISE PRINTED STICKERS

If you want to display the image through a glass window from inside to the outside (Shop display) it is strongly recommended to use the transparent film. The film should be printed 'mirror-wise', so the unprinted side would be adhered to the glass. The film will stick on the inside of the window with visibility from the outside.
